

# Working Prototype Known Problems Report

Product name:

FilterShare

Team name:

Team 16

Date:

07/25/16

Functions not working correctly:

- We planned to implement the following reach goals after sprint 3 :
  - searchby hashtags,
  - Edit shared filters,
  - Comments on filters
- we were unable to execute the following reach goals because we did not have enough time.
- In the camera page, when the user touches the boundary of the screen, autofocus rectangle remains in the screen.
  - Set the boundary for the possibly generated rectangle in the camera preview.
- OOM error occurs if the user goes between the next page and back page a lot of time.
  - Free the bitmap memory resources
- When the user shares the fieter and if the user clicks the button more than once, same filters are shared multiple times.
  - Set the lock for the action of clicking button.
